

Upgrading firmware of a TS9000/A to use the generic Windows7, Windows8 and Windows8.1 USB driver

First you must install and run your TS9000/A analyser on a **Windows XP** machine

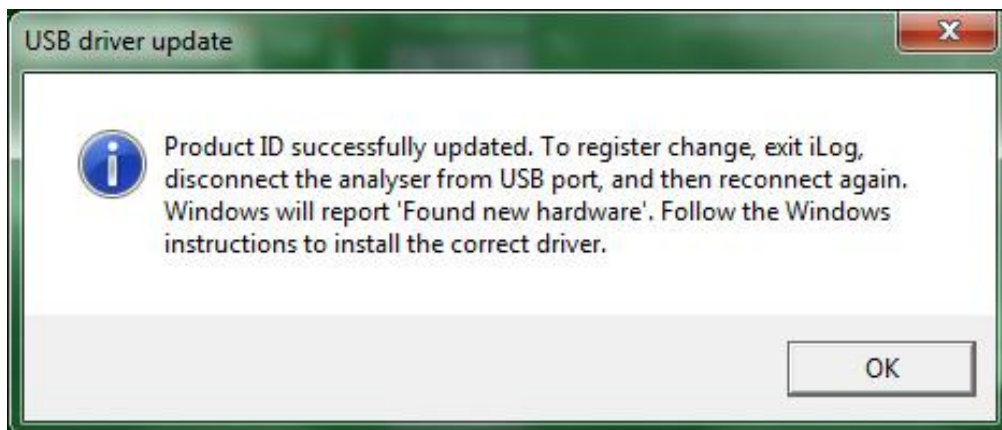

Go to our website www.microgeneelectronics.com and download the latest software **TS9000Av213.zip**. Unzip and run Setup

Connect your TS9000/A to the XP machine and run the iLog application 

Click CTRL U and this dialog will appear:

Select '6001', click 'Update now' and after a few seconds you will get this message:

Disconnect your TS9000/A from the XP machine and finally connect to your Windows7,8,8.1 machine.

Windows update will now automatically install the correct USB driver. (Obviously, you must be on-line to do this)

Install the latest iLog software and double-click the icon to run:
